GNS Ceramics recommends that our retail shops pass on the following information to the installer and end-user.

Ceramic tiles are only one component of a much larger building system. It is our experience that failure of any tiling system is very often the result of a combination of factors. For example; inappropriate design, type of substrate, surface preparation, temperature during installation, adhesives, incompatibility of

Installation Instructions

products, product failure, environmental factors skill and knowledge of the installers etc; the latter being supplied or controlled by a variety of manufacturers and tradesmen. GNS Ceramics has no involvement in the design, selling and installation processes and once goods have been dispatched from our warehouse we have no control over where and how these products are used. As a result the project manager, and or the tiler are the only people in a position to ensure that all the components used in a project are compatible and that the product is installed in accordance with the Australian Building Code and the Australian Standards.

Installation Instructions for all types of tiles can be found in the GNS Ceramics Price List, and on our website. We suggest these are followed at all times.

### **Cleaning and Maintenance**

Do not use abrasive cleaners and chemicals which could permanently scratch and damage the surface of the tile. For daily cleaning we recommend the use of a mild PH Neutral detergent. Should a more vigorous cleaning programme be required we recommend the use of a proprietary tile cleaner from a specialty tile supplier.

### Colour & Pattern Variation Guide

#### Classes of Use

The classification has taken into account the recommendations of the Australian Standards; however, they are given for general guidance only. They are valid for the given application under **NORMAL CONDITIONS** and should not be taken to provide accurate product specifications for specific requirements.

#### WARNING: Other standards and building code requirements may affect your selection of tiles.

Consideration should be given to the footwear, type of pedestrian traffic and cleaning methods expected. Floors should be adequately protected against soiling from following trades during installation; they should also be protected against scratching dirt at the entrances to building by interposing footwear cleaning devices. For example, mats, shoe scrapers, static devices, etc.

**CLASS 2** - Floor coverings in areas that are walked on with soft-soled or normal footwear with, at the most, occasional small amounts of scratching dirt; For example, main bathrooms, bedrooms with the exception of those areas that experience heavy pedestrian traffic, i.e. work boots, stilettos, and outdoor shoes.

**CLASS 4** - Floor coverings that are walked on by regular traffic with some scratching dirt so that conditions are more severe than CLASS 3; For example, entrances, laundries with external access, living areas, entertainment areas, patio's, sales rooms, motels.

### DETERMINATION OF CHEMICAL RESISTANCE

### Test Specimen

5 Pieces of 600×300mm Tile

### **Accredited Test**

EN ISO 10545-13: 2016

### **Results**

Test Solutions	Class
1.Ammonium Chloride solution 100g/l	GA
2.Sodium Hypochlorite solution 20mg/l	GA
3. Hydrochloric Acid solution 3% v/v	GLB
4.Citric Acid solution 100g/l	GLB
5.Potassium Hydroxide solution 30g/l	GLA
6.Hydrochloric Acid solution 18% v/v	GHB
7.Lactic Acid solution 5% v/v	GHB
8. Potassium Hydroxide solution 100g/I	GHA

Class GA GLA GHA: No visible effect

Class GB GLB GHB: No visible effect, however can't remove the lines by HB pencil test; Or visible effect, but clear by reflection test

Class GC GLC GHC: Visible effect and blurred by reflection test

According to **EN 14411:** 2016, for water absorption of glazed tile:  $E \le 0.5\%$ , the minimum class for solution of 1 and 2 is GB, the tiles comply with the requirement.

## DETERMINATION OF RESISTANCE TO STAINS

### Test Specimen

5 Pieces of 600×300mm Tile

### Accredited Test

EN ISO 10545-14:2015

### Results

Staining Agent	Class
1.Green/Red paste in light oil(paste)	5
2. lodine in alcohol, 13g/L(chemical/oxidizing)	2
3.Olive Oil(film)	5

Class 5 corresponds to the greatest ease of removing the particular stain; the minimum class for all staining agent is 3, the tiles do not comply with the requirement.
